OLIST

BUSINESS ANALYSIS REPORT

Business Insights & Recommendations

From data to decisions: commercial performance, customer experience, fulfillment and payment behavior.

THE OPPORTUNITY AT A GLANCE

97.02%
Orders delivered

3.12%
Repeat-customer rate

R$13.22M
Delivered product sales

THREE MANAGEMENT PRIORITIES

01 **Protect the delivery experience**
Late-delivery reviews average 2.27 / 5 versus 4.29 / 5 on-time.

02 **Build repeat-purchase behavior**
Only 2,997 of 96,096 customers placed multiple orders.

03 **Improve follow-up and reconciliation**
R$586.41K in recorded payments relate to non-delivered statuses.

SCOPE

Historical Brazilian Olist public data (orders placed 2016-2018). All monetary amounts are Brazilian reais (R$). The report supports management decisions; it is not an audited financial statement.

Executive summary

What the dataset establishes - and where management attention can create value.

99,441 Orders recorded	**96,478** Delivered orders	**96,096** Unique customers
R$13.22M Delivered product value	**4.09 / 5** Average review score	**2.98%** Multi-payment orders

The decision in three moves

PRIORITIZED MANAGEMENT BRIEF

PRIORITY 01 | Reduce delivery delays

Evidence: 6,534 late deliveries among 96,470 evaluable deliveries (6.77%). Ratings differ by 2.02 points between late and on-time deliveries.
Action: Segment delay causes by state, seller and carrier; monitor delivery SLAs and pilot corrective workflows.

PRIORITY 02 | Improve customer retention

Evidence: 2,997 repeat purchasers (3.12% of unique customers) during the observed period.
Action: Build purchase cohorts and 30/60/90-day repeat measures before testing personalized post-purchase outreach.

PRIORITY 03 | Strengthen operational visibility

Evidence: 1,234 canceled or unavailable orders; recorded payments on non-delivered statuses total R$586.41K.
Action: Review cancellation and availability reasons and reconcile order, payment and refund records.

Important: A high delivery rate and positive average rating do not rule out concentrated problems. These are descriptive patterns, not proof of causation.

Sales & products

Focus on realized product value, category contribution and evidence-based growth choices.

R$13.59M
Ordered product value

R$13.22M
Delivered product sales

39.83%
Top-five category share

Leading delivered product categories

RANKED BY PRODUCT SALES VALUE

CATEGORY	DELIVERED SALES
01 Health Beauty	R$1.23M
02 Watches Gifts	R$1.17M
03 Bed Bath Table	R$1.02M
04 Sports Leisure	R$0.95M
05 Computers Accessories	R$0.89M

Business interpretation and recommended actions

FINDING | Category concentration

The top five product categories account for 39.83% of delivered product value; this suggests category prioritization matters, but does not establish margins or inventory performance.

RECOMMENDATION | Prioritize by contribution and economics

Compare category demand with contribution margin, returns, availability and seller capacity before expanding spend or assortment.

Metric definition: Ordered and delivered product values sum order-item prices, excluding freight. Delivered = order_status "delivered". Totals differ from gross payment records.

Customers & geography

The full-period customer base is large, with low observed repeat purchasing and uneven geographic reach.

96,096
Unique customers

2,997
Repeat customers

3.12%
Repeat-customer rate

Regional demand footprint

CUSTOMER ADDRESS | FULL DATASET

STATE	UNIQUE CUSTOMERS	DELIVERED SALES
Sao Paulo (SP)	40,302	R$5.07M
Rio de Janeiro (RJ)	12,384	R$1.76M
Minas Gerais (MG)	11,259	R$1.55M

SP represents approximately 41.9% of unique customers.

Turn customer behavior into a retention program

FINDING | Low repeat purchase incidence

About 96.9% of unique customers had only one order in the dataset. A repeat-order rate of 3.12% is a descriptive full-period measure, not a like-for-like retention cohort.

RECOMMENDATION | Cohort-first CRM experimentation

Create cohorts by first purchase month, measure 30/60/90-day repeat conversion, segment by geography and product category, then A/B test targeted customer follow-up.

Interpretation guardrail: Customers first acquired near the dataset end have less time to repeat. Do not call the observed 3.12% a long-run customer retention rate.

Delivery & customer experience

A strong delivery baseline coexists with a material satisfaction gap for late orders.

93.23%
On-time share of evaluated

6.77%
Late share of evaluated

12.56 days
Average delivery time

What the review evidence shows

ON-TIME DELIVERIES

4.29 / 5

89,936 evaluated deliveries

LATE DELIVERIES

2.27 / 5

6,534 evaluated deliveries

Recommended operating response

01 | Diagnose and reduce delays

Segment late-order rate and delay duration by customer state, seller and month. Prioritize segments with both material volume and elevated delay rates; check carrier data where available.

02 | Improve customer communication

Test proactive delay notifications and clear delivery estimates, and monitor review-score changes for affected customer groups.

03 | Monitor a balanced service scorecard

Track evaluated on-time rate, late share, days late among late orders, and weighted average review score by delivery status.

Evidence caution: Ratings differ by delivery class, but this is an association rather than a causal estimate. On-time / late categories exclude missing or invalid delivery-date cases.

Sellers & payments

Control seller-level fulfillment risks while maintaining a clear distinction between payments and sales.

Marketplace sellers

SELLER MANAGEMENT

2,970

Sellers with delivered sales

13.27%

Top 10 sellers share of delivered sales

FINDING | Performance needs volume context

73 sellers had at least 20 orders and completion below 95% across the full dataset. Non-delivered statuses may include in-transit orders and are not automatically seller fault.

ACTION | Risk-based seller review

Prioritize seller reviews using non-delivered order count and completion rate, then investigate order-status reasons and logistics context before interventions.

Payment behavior and reconciliation

PAYMENT RECORDS | ALL STATUSES

R$16.01M

Recorded payment value

78.34%

Credit-card value share

R$586.41K

Non-delivered status payments

FINDING | Channel concentration and payment-status visibility

Payments are concentrated in credit cards. Some recorded payment value relates to orders not classified as delivered; 2.98% of orders with payment records have multiple payment rows.

ACTION | Review payment operations

Track payment-method fees and availability; reconcile cancellations and unavailable statuses against refunds and settlements using payment-processor data.

Action plan & measurement

Translate the descriptive findings into controlled experiments and measurable operating improvements.

90-day proposed action sequence

ILLUSTRATIVE | SUBJECT TO OWNERSHIP & CAPACITY

0-30 DAYS

Delivery diagnostics & payments review

Suggested owners: Operations / Finance

Execution: Map late-order drivers; review canceled and unavailable payment cases.
Measure: On-time rate; unresolved payment cases

30-60 DAYS

Retention cohorts & seller review

Suggested owners: CRM / Seller Operations

Execution: Create cohort retention baselines; assess sellers below completion thresholds.
Measure: 30/60/90-day repeat rate; at-risk seller count

60-90 DAYS

Pilot improvements & measure impact

Suggested owners: Cross-functional

Execution: Run controlled retention and delay-communication pilots; assess category opportunities.
Measure: Incremental repeat orders; review-score movement

Analytical definitions and limitations

01 Data: Supplied Olist orders, items, customer, seller, product, review and payment CSVs; associated SQL analytic views and Power BI screenshots.

02 Time window: Order purchases span 2016-2018. Trend visuals focus on Jan 2017-Aug 2018, avoiding sparse boundary months.

03 Value definitions: Delivered product sales = item prices for delivered orders, excluding freight. Payment value = all recorded payment amounts; it is not net revenue.

04 Risk definitions: Non-delivered is a current dataset status, not proof of loss, failed delivery, or refund liability. Refund/settlement details are not provided.

05 Causality & economics: Review associations do not establish causation; product profitability, marketing costs, carrier SLAs and true lifetime value cannot be inferred here.
